

Project Design Phase

Courier Management System (CMS) | Salesforce Administrator with AI Agentforce | Mazharul Uloom College (Autonomous), Ambur

1. Problem–Solution Fit

CMS removes fragmented courier operations by automating shipment tracking, delivery assignment, billing and reporting in one centralized Salesforce platform. Each pain point from the Ideation Phase maps to a feature.

Problem	Solution in CMS
Manual, delayed tracking	Delivery Update object and a flow that updates shipment status
Manual agent assignment	Assigned Agent lookup on Shipment, agents grouped by branch
No customer visibility	Single shipment record with full update history
Fragmented billing	Invoice object linked to Shipment with payment status
No performance insight	Reports and Courier Management Dashboard

2. Proposed Solution

Parameter	Description
Problem	Manual shipment management
Solution	Salesforce-based Courier Management System
Innovation	Automated tracking and billing
Impact	Faster deliveries and better visibility
Business model	Courier services
Scalability	Multi-branch ready

3. Solution Architecture

Layer	Components
Data	Customer, Shipment, Delivery Agent, Branch, Delivery Update, Invoice objects
Logic	9 validation rules and one record-triggered flow
Presentation	Courier Management System Lightning app, custom tabs, page layouts
Security	Four profiles and four roles
Analytics	Custom report types, reports, dashboard

Object relationships

- **Customer:** Shipment → Customer (lookup)
- **Agent and branch:** Shipment → Delivery Agent (lookup); Delivery Agent → Branch (lookup)
- **Tracking:** Delivery Update → Shipment (master-detail)
- **Billing:** Invoice → Shipment (lookup)
